2   "text": " Hari here, I'm going to run the daily stand up meeting today. We can
get started. Morning Hari, morning Sindhu. Radhakrishnan here. So yesterday
I've been assigned with a couple of tickets related to balance transfer. So
I have written manual test cases initially for that and got it signed off
from the BA and PO in our team. and since the latest build is now available
in QA, I have started testing those scenarios and monitoring how the system
behaves for the different scenarios. So far, the system is good and there
are no any defects and if there are any, I will raise it accordingly and
once the execution is done, I will focus on converting those steps into
automation scripts and see how it goes. So that's the update from my side.
Thanks. Thank you Radhakrishnan. Good morning everyone. Sindhu here.
Yesterday I have completed smoke and regression testing for the payments
module and log3 defects in Jira. And today I will be continuing manual

Test case Generation:

Formatted response given below:

Test Cases: Automated Insurance Pre-Authorization for Radiology Tests

Feature: Automated Insurance Pre-Authorization for Radiology Tests

Objective:
Ensure the Automated Insurance Pre-Authorization for Radiology Tests feature functions correctly by validating insurance eligibility, handling pre-authorization workflows, managing failures, and providing appropriate notifications and payment options.

Test Case 1: Verify Insurance Eligibility via API

Test Case ID: HC-311-TC-01

Test Objective:
Verify that the system triggers an API call to the insurance provider to check insurance eligibility when a patient is scheduled for a radiology test.

Preconditions:

- Patient is scheduled for a radiology test (CT, MRI, or ultrasound).

- Insurance provider API is available and configured correctly.

Test Steps:

Step No.	Action
1	Log in as a billing coordinator.
2	Select a patient scheduled for a radiology test.
3	Click on " Schedule Test ".
4	Verify that the system sends an API request to the insurance provider to check insurance eligibility.
5	Verify that the API request contains required patient information (Patient ID, Insurance ID, Test Type).

Expected Result:

The system successfully sends an API request to the insurance provider and retrieves the insurance eligibility response.

Test Case 2: Pre-Authorization Required - Successful Authorization

Test Case ID: HC-311-TC-02

Test Objective:

Verify that the system initiates the pre-authorization process and stores the authorization ID and approval date in the billing record when pre-authorization is required.

Preconditions:

- Patient is scheduled for a radiology test requiring pre-authorization.
- Insurance provider API returns a response indicating pre-authorization is required.

Test Steps:

Step No.	Action
1	Log in as a billing coordinator.
2	Select a patient scheduled for a radiology test requiring pre-authorization.
3	Click on " Schedule Test ".
4	Verify that the system initiates the pre-authorization process.
5	Verify that the system stores the authorization ID and approval date in the billing record.

Expected Result:

The system successfully initiates the pre-authorization process, retrieves the authorization ID and approval date, and stores them in the billing record.

Test Case 3: Pre-Authorization Required - Failed Authorization

Test Case ID: HC-311-TC-03

Test Objective:

Verify that the system handles failed pre-authorization and notifies the coordinator and patient when authorization is required but not obtained.

Preconditions:

- Patient is scheduled for a radiology test requiring pre-authorization.
- Insurance provider API returns a response indicating pre-authorization failure.

Test Steps:

Step No.	Action
1	Log in as a billing coordinator.
2	Select a patient scheduled for a radiology test requiring pre-authorization.
3	Click on " Schedule Test ".
4	Verify that the system attempts to initiate the pre-authorization process but fails.
5	Verify that the system notifies the coordinator and patient about the failed pre-authorization.

Expected Result:

The system handles failed pre-authorization, notifies the coordinator and patient, and provides alternative payment options.

Test Case 4: Test Not Covered - Notification and Alternative Payment Options

Test Case ID: HC-311-TC-04

Test Objective:

Verify that the system notifies the coordinator and patient and provides alternative payment options when a radiology test is not covered by insurance.

Preconditions:

- Patient is scheduled for a radiology test not covered by their insurance.
- Insurance provider API returns a response indicating the test is not covered.

Test Steps:

Step No.	Action
1	Log in as a billing coordinator.
2	Select a patient scheduled for a radiology test not covered by insurance.
3	Click on " Schedule Test ".

Step No.	Action
4	Verify that the system notifies the coordinator and patient that the test is not covered.
5	Verify that the system provides alternative payment options.

Expected Result:

The system notifies the coordinator and patient, provides alternative payment options, and ensures a smooth patient experience.

Test Case 5: Negative Scenarios

Test Case ID: HC-311-TC-05

Test Objective:
Verify that the system handles negative scenarios effectively.

Negative Scenarios Covered:

- Insurance provider API is unavailable or returns an error.
- Patient information is invalid or missing.
- Test type is not supported.

Preconditions:

- Insurance provider API is unavailable or returns an error.
- Patient information is invalid or missing.
- Test type is not supported.

Test Steps:

Step No.	Action
1	Simulate insurance provider API unavailability or API error.
2	Verify that the system handles the error and displays a meaningful error message.
3	Verify that the system handles invalid or missing patient information.
4	Verify that the system handles unsupported test types.

Expected Result:

The system handles negative scenarios gracefully, provides meaningful error messages, and ensures a smooth user experience.

Test Coverage Summary

Test Case ID	Scenario	Coverage
HC-311-TC-01	Insurance Eligibility Verification	API eligibility validation
HC-311-TC-02	Successful Pre-Authorization	Authorization workflow and record update

Test Case ID	Scenario	Coverage
HC-311-TC-03	Failed Pre-Authorization	Failure handling and notifications
HC-311-TC-04	Insurance Coverage Failure	Notifications and payment alternatives
HC-311-TC-05	Negative Scenarios	Error handling and validation

Conclusion:

These test cases validate the key workflows and edge cases for the Automated Insurance Pre-Authorization for Radiology Tests feature. Executing these scenarios ensures the system provides accurate insurance validation, efficient pre-authorization handling, proper error management, and a seamless experience for patients and billing coordinators.
